

AMAGE Systems

assets under control

An innovative IT solution that supports the entire life cycle of an industrial plant – from the design and production phase of technological devices, over their installation all the way to servicing and maintenance of the finished facility. ■

ASSETS
UNDER
CONTROL

AMAGE application is

It is an innovative IT solution created based on our experience at the helm of complex projects involving production, installation and servicing and maintenance of technology for vast industrial plants. The system is extraordinarily flexible and allows for working comfort. It was built with

working in often very difficult conditions in mind – at a construction site or in a functional facility with a continuous working model. It provides access to information whenever and wherever. It quickly produces real and measurable results after a successful implementation.

Who is AMAGE for?

Contractors of complex installation projects

Production and servicing of technological devices

Industrial plants and other facilities with a continuous working model

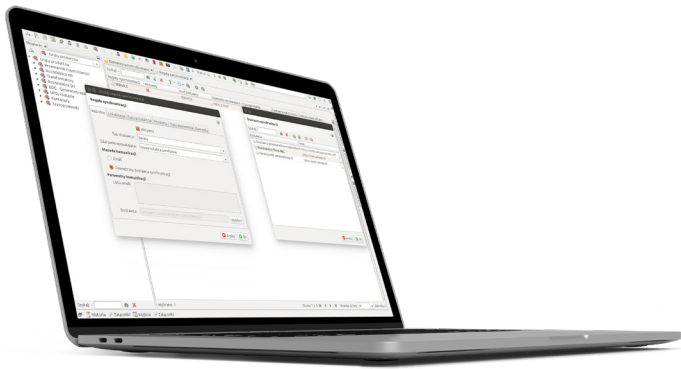

AMAGE **Installation** Master

AMAGE **Service** Master

AMAGE **Maintenance** Master

How can you benefit from AMAGE?

- An adequately chosen marking system for your devices that can survive any conditions – next to a big furnace or in a sewage treatment plant. You will always be able to swiftly identify the device and get to its documentation.
- Mobile apps – a terminal, a smartphone or a tablet – thanks to these you will be able to access or send critical information wherever and whenever.
- Planned working tasks – installation, maintenance, check-ups – working comfort and safety for your technology.
- Cost reduction thanks to cohesive information – prevention instead of costly measures after breakdowns happen, elimination of unnecessary outages, rational usage of replacement parts.
- A safe communication tool for all parties involved in a project – both companies and people.
- Smart technical documentation in digital form – record all essential events.

WEB

- A safe and always accessible place for data exchange between partner companies
- Optimal data base organization and synchronization

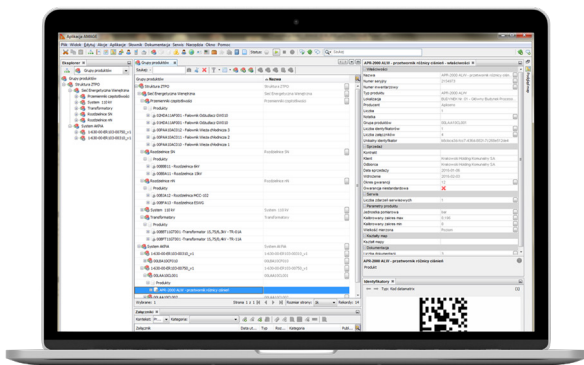

MOBILE APPS

- Optimal support for servicing and in-field maintenance personnel
- Technical documentation and device identification with just one click
- Data entered in the place of its origin

DATA BASE

- Full information on essential things at the time and place that the user chooses
- A complete data base of the technology and history of all devices
